

RIDHO HAFIZ

SOFTWARE DEVELOPER, GOLANG | .NET

+62 8128334210 | ridhohafiz98@gmail.com | www.linkedin.com/in/ridho-hafiz/

BACKGROUND

I am a software developer with a strong background in .NET development, system integration, and backend services, supported by an electronics and robotics foundation. I have experience building large-scale enterprise systems in transportation, banking, and insurance industries, with a focus on performance, reliability, and system modernization. I am highly adaptable, experienced in both legacy and modern architectures, and committed to continuous learning while balancing professional work and academic development.

EXPERIENCE

PT LAWENCON on Client PT BRI | SOFTWARE DEVELOPER (.NET & GOLANG)

Jakarta, CA, 2022 – 2025

Joined initially as a .NET Developer, then transitioned to Golang Developer based on project needs, and later returned to .NET for insurance core systems.

Key contributions:

- Worked on legacy banking systems, including building schedulers and processing engines for the old BRICAMS application.
- Successfully supported high-throughput transactions, processing over 300,000 transactions with optimized performance.
- Contributed to the development of a priority transaction system, allowing high-priority clients to be processed faster.
- Participated in the modernization of B2B banking systems (CMS/Add-ons), adopting microservices architecture and new technologies such as: RabbitMQ, Elasticsearch, gRPC, MinioIO, Grafana etc.
- Later assigned to the Insurance Core System, handling credit insurance, life insurance, claims, and subrogation processes. And migration from middleware-based systems to internal services, including full application redevelopment.
- Successfully reduced race condition issues from approximately 10% of daily transactions to 0%, significantly improving system reliability.

Achievement:

- Awarded Employee of the Month (2023) for performance and contribution.

PT NUTECH INTEGRASI | HARDWARE INTERFACE PROGRAMMER / SOFTWARE ENGINEER

Jakarta, 2020 – 2022

Developed and maintained desktop-based e-ticketing systems using .NET Framework (C#) for public transportation services.

Key responsibilities included:

- Building applications for ticket scanning and ticket purchasing.
- Developing desktop applications that communicate directly with hardware via serial communication, including gates, ID/passport/driver license scanners, running text displays, and other devices.
- Integrating backend systems using REST APIs and Socket.IO to enable real-time communication between computers and control towers.

ENSURING SYSTEM STABILITY AND REAL-TIME PERFORMANCE IN

- high-traffic transportation environments.

SKILLS

- Code Programming: C#, Golang, SQL
- Frameworks & Platforms: .NET Framework, .NET Core, ASP.NET, Gin
- Architecture: Microservices, REST API, gRPC, Event-Driven Architecture
- Messaging & Data: RabbitMQ, Elasticsearch, Minio IO, Ftp.
- Realtime & Integration: Socket.IO, Serial Communication, API Integration
- Databases: SQL Server, PostgreSQL
- Others: System Migration, Performance Optimization, Concurrency Handling

EDUCATION

BACHELOR OF COMPUTER SCIENCE, BINUS UNIVERSITY

- Relevant coursework: Advanced Financial Accounting and Reporting
- GPA: 3.29

ASSOCIATE OF ELECTRONIC ENGINEER, UNIVERSITY STATE OF JAKARTA

- Focus on Automation industry and Robotic
- GPA: 3.58
